and take appropriate actions when necessary.

- Investigation by CFS is ongoing.
- Some strains of *E. coli* can cause diseases through the production of a toxin called Shiga toxin. These strains are called STEC. STEC infection is transmitted by faecal-oral route through contaminated food and water, or direct contact with STEC carrying animals. Moreover, due to poor personal hygiene, person-to-person transmission of this pathogen is possible through oral-faecal route. Symptoms of STEC infection include abdominal pain and watery diarrhoea that may in some cases progress to bloody diarrhoea. Fever and vomiting may also occur. Intestinal bleeding and serious complications such as haemolytic uraemic syndrome may also develop in some people. *E. coli*, including STEC, cannot survive under high temperature and can be killed by thorough cooking.
