

Dear sir/madam,

Regarding the proposed amendments to the Preservatives in Food Regulation, I appreciate the good update and effort by the government to further enhance food safety.

I have the following suggestion for your further consideration :

Since multivitamins products are de-regulated from drug, food standards is applicable to this kind of product so it will be great if this product category could be included in this update. As I can see in Codex, there are preservatives standards applied to this category (i.e. 13.6) called "food supplements" which includes vitamins, minerals supplements in unit dose forms such as capsules, tablets, powders, solutions, etc. where national jurisdictions regulate these products as food.

As a result, if this update will cover the above product category. it will be beneficial to the consumer, industry and authorities from the safety and surveillance perspective.

Thank you very much for your kind attention.

Kind Regards,

Mr. Lee
